Newport Beach, Calif. – February 29, 2016 – Hacker Industries, Inc. recently added several new independent, third-party laboratory acoustical tests on I-Joist and steel deck assemblies.

The new test results are published in Hacker Industries, Inc.'s Acoustical Design Guidelines, which is now available to download on the company's website.

"Hacker Industries, Inc. is committed to further demonstrate the acoustical performance of our FIRM-FILL® SCM resilient sound mats with FIRM-FILL® Brand Gypsum Concretes in various assemblies and different floor finishes," said Dean Hacker, Vice President of Sales and Marketing. "The test results are continuing to impress with STC and IIC values that catapult us into Grade A Performance."

About Hacker Industries, Inc.-

Hacker Industries, Inc. was established upon the simple belief that when given a choice of floor underlayments, the building community would choose the product of greater value. Hacker Floor Underlayments and sound control mats are listed in over 100 UL floor/ceiling assembly systems designed to achieve excellent STC and IIC sound ratings. With over three billion square feet installed since 1983, Hacker Floor Underlayments are the proven choice to provide a durable, flat floor surface ideal for virtually any finished floor covering.
